

Nimbusware Inc.

Employee Technology & IT Support Guidebook

Version 3.2 — Internal Use Only
Last updated: August 2026

1. VPN Access

Nimbusware uses GlobalProtect VPN for all remote access to internal systems. VPN is mandatory when accessing internal tools from outside the office network, including the ticketing system, internal wiki, and finance dashboards.

1.1 Setting Up VPN

- Download the GlobalProtect client from the Software Center (Windows) or Self Service (Mac).
- Portal address: **vpn.nimbusware.internal**
- Log in with your Nimbusware SSO credentials (same as email).
- MFA push notification will be sent to the Okta Verify app on your registered device.
- First-time connection can take up to 2 minutes while the client downloads security policies.

1.2 Common VPN Issues

- **Error 'Cannot connect to portal':** Confirm you're on a stable internet connection, then restart the GlobalProtect service from Task Manager > Services.
- **MFA push not arriving:** Check Okta Verify notification permissions, or use the 6-digit backup code shown in the app.
- **VPN connects but internal sites don't load:** Run 'ipconfig /flushdns' (Windows) or 'sudo dscacheutil -flushcache' (Mac), then reconnect.
- VPN sessions automatically time out after 10 hours of inactivity and must be re-authenticated.

2. Password & Account Policy

2.1 Password Requirements

- Minimum 14 characters, including at least one uppercase letter, one number, and one symbol.
- Passwords expire every 90 days for standard accounts and every 45 days for admin accounts.
- The last 8 passwords cannot be reused.
- Passwords must not contain your username, first name, or last name.

2.2 Resetting Your Password

- Self-service reset: visit **reset.nimbusware.internal** and verify identity via Okta Verify.

- If you're locked out and cannot access Okta Verify, contact the IT Help Desk at extension 4100 with your employee ID for manual verification.
- Locked accounts after 5 failed login attempts unlock automatically after 30 minutes, or immediately via the Help Desk.

2.3 Multi-Factor Authentication (MFA)

All employees must enroll in Okta Verify within 3 business days of their start date. MFA is required for VPN, email, the HR portal, and all admin-tier internal tools. Loss of an MFA device must be reported to IT Security immediately at security@nimbusware.internal.

3. Laptop & Hardware Provisioning

3.1 New Hire Laptop Setup

- New employees receive a pre-imaged laptop (Windows 11 or macOS, per role) on day one.
- First boot requires connecting to the 'Nimbus-Onboarding' Wi-Fi network to pull the latest security policies and software bundle.
- Standard software bundle: Okta Verify, GlobalProtect VPN, Microsoft 365, Slack, and the role-specific toolkit assigned by your manager.
- Full provisioning (bundle install + policy sync) typically takes 45–60 minutes.

3.2 Hardware Issues & Replacement

- Hardware malfunctions should be logged as a ticket under category 'Hardware' in the IT Service Desk portal, not emailed directly.
- Loaner laptops are available from the IT desk on the 4th floor for repairs expected to take longer than 1 business day.
- Laptop refresh cycle is every 3 years for standard roles, every 2 years for engineering roles.

4. Software & Access Requests

Employees needing access to software not included in their default bundle must submit a request through the Service Desk portal under 'Access Request'. Manager approval is required for any tool with a per-seat license cost above \$20/month.

- Standard access requests are fulfilled within 1 business day.
- Requests involving finance, HR, or customer data systems require additional approval from the relevant Data Owner and may take up to 3 business days.

- Shared/team licenses (e.g., design tools, analytics platforms) should be requested by a team lead on behalf of the group, not individually.

5. Email & Collaboration Tools

5.1 Email

Nimbusware uses Microsoft 365 for email, hosted at mail.nimbusware.com. Mailbox storage limit is 50GB per user. Emails older than 5 years are auto-archived to a read-only folder unless placed on legal hold.

5.2 Slack

- Slack is the primary internal messaging tool; email should be reserved for external or formal communication.
- The #it-helpdesk channel is monitored 9am–6pm IST for quick, non-urgent IT questions.
- Critical outages should always go through a Service Desk ticket, not Slack, so they're properly tracked.

6. Wi-Fi & Office Network

- **Nimbus-Corp:** primary employee network, requires SSO login, full internal access.
- **Nimbus-Guest:** visitor network, internet-only, no access to internal systems, password rotates weekly (available at reception).
- **Nimbus-Onboarding:** used only during initial laptop setup for new hires; do not use for daily work.
- Report persistent Wi-Fi dead zones to Facilities via the Service Desk portal, category 'Office Infrastructure'.

7. Security Incident Reporting

If you suspect a phishing email, malware, or unauthorized account access, do not investigate it yourself. Forward suspicious emails to **phishing@nimbusware.internal** using the 'Report Phishing' button in Outlook, and notify your manager.

- Suspected security incidents involving company data must be reported within 1 hour of discovery per company policy.
- Never click links or download attachments from unexpected emails, even if they appear to be from a colleague.
- The Security team investigates all reports and will follow up within 24 hours with next steps.

8. Remote Work & BYOD Policy

- Remote employees must connect via VPN for any access to internal systems, without exception.
- Personal devices (BYOD) may be used for email and Slack only, via the approved Mobile Device Management (MDM) profile.
- BYOD devices must have a passcode/biometric lock enabled and will be remotely wiped of company data if lost or stolen — personal data is not affected.
- Company laptops must not be used on public, unsecured Wi-Fi without VPN active.

9. Printers & Peripherals

- Office printers are auto-discovered on Nimbus-Corp Wi-Fi under the name 'Nimbus-Print-Floor[N]'.
- To install manually: Settings > Printers & Scanners > Add Printer > search 'Nimbus-Print'.
- Print quota is 500 pages/month per employee; overages route to your manager for approval.

10. IT Help Desk Contact

Channel	Details	Hours
Service Desk Portal	helpdesk.nimbusware.internal	24/7 ticket submission
Phone	Extension 4100 (internal), +1-555-0142 (external)	8am–8pm IST, Mon–Fri
Slack	#it-helpdesk	9am–6pm IST, Mon–Fri
Security emergencies	security@nimbusware.internal	24/7, monitored on-call
